Inhalant Abuse:

Nationwide Problem is Also an Arkansas Issue

any parents and children remain unaware of the health risks of inhalant abuse. Inhalant abuse is the intentional breathing of vapors or fumes from common household and commercial products.¹ Inhalants produce effects similar to those of alcohol intoxication and can be addictive. Depending on the amount inhaled, the user can feel less inhibited or slightly stimulated. Other effects include dizziness, euphoria, lack of coordination, hearing loss, apathy, slurred speech, and even

unconsciousness. Long-term effects include brain, bone marrow, kidney, liver, and nerve damage.^{1,2} Sudden sniffing death syndrome, or death by first-time users, is associated with the inhalation of vapors from some aerosol products and air conditioning coolant.¹

2015

Inhalant abuse is a real problem nationwide as well as in the state of Arkansas. Inhalant abuse is more popular than marijuana consumption among sixth- and eighth-graders.³ Recent studies have found:

- In 2011, 9.9 percent of Arkansas children reported abusing inhalants during their lifetime, more than double the rate of reported abuse of over-the-counter drugs.³
- Specifically, 6.8 percent of Arkansas sixth-graders and 11.6 percent of the state's eighth-graders reported abusing inhalants during their lifetime.³
- This same year, 2.9 percent of Arkansas sixth-graders reported having abused inhalants at least once in the past 30 days, making inhalants the most abused substance within this age group.³

What You Can Do¹:

- Learn what products can be harmful if abused as inhalants.
- Know the symptoms of inhalant abuse.
- Avoid buying solvent-based products. Substitute water-based products and non-aerosol packaging.
- Learn what slang words are used to describe inhalants, such as huffing, sniffing, dusting or bagging.
- Discuss inhalant abuse with your children.
- Talk to your children about the proper use of household products, emphasizing the harmful effects if the products are used incorrectly.
- Be aware of what your child is doing at all times after school.
- Keep products stored safely away from young children.
- If solvent-based products are the only alternative, supervise their use and keep them out of reach when not in use.

Symptoms of Inhalant Abuse⁵:

- Drunk, dazed, or dizzy appearance
- Slurred or disoriented speech
- Uncoordinated body movements
- Red eyes and runny nose
- Spots and/or sores around the mouth
- Unusual chemical odor on clothing or breath

Back-to-School and Other Products Safety Check⁴:

POSSIBLE INHALANT	SAFE ALTERNATIVE		
Magic markers and dry erase markers	Non-toxic/low-odor mark- ers (avoid scented markers)		
Glues, rubber/contact cement	Products that do not con- tain xylene or toluene		
Correction fluid	Correction tape		
Computer air duster	Canned carbon dioxide		
Nail polish and nail polish remover	Non-toxic nail polish and acetone-free nail polish remover		
Aerosol deodorant	Stick deodorant		
Cooking spray	Oil spray pump		
Whipped cream in aerosol cans or cartridges	Whipped cream in tub		

- Signs of paint or other products where they wouldn't normally be, such as on face, lips, nose or fingers
- Nausea and/or loss of appetite
- Chronic inhalant abusers may exhibit symptoms such as hallucinations, anxiety, excitability, irritability, restlessness, or anger
